

How to Scan QR Codes

1. Visit your smartphone's app store and search for QR code reader. We recommend iNigma, or NeoReader.
2. Download the app of your choice to your smartphone. Most of them are free!
3. Once the app has been downloaded to your phone, open the software and place your phone's camera over the QR code that you wish to scan. Your phone will decode the QR code and take you to our special offer!

This is a QR Code. You can scan these with your smartphone to get additional information on products and coupons or special offers!
